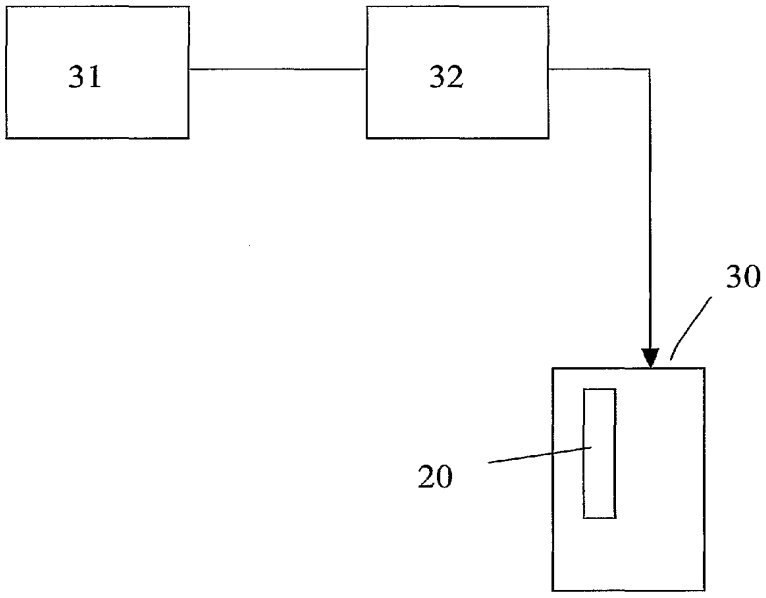
(54) Title: MULTIPLE TICKETS FOR RECEIVING CONTENT



(57) Abstract: A method is disclosed for accessing content via a device (30) whereby a ticket (20) is used that can be sent to the device (30) and whereby a validation count field (26) is comprised by the ticket (20) that is arranged for being decreased each time that content is accessed. If the content is stored on the device (30) after this content has been received by the device (30) it is possible to let the user view or use this content without having to send this content to the device (30) again. In such a much more efficient procedure, the ticket (20) can be validated each time the user views or uses the stored content in stead of validating the ticket (20) each time the content is received by the device (30).
